Values are estimated and may vary.

Opportunities

These are opportunities to speed up your application by optimizing the following resources.

Resource to optimize		Estimated Savings	
1	Enable text compression	<div></div>	14,76 s
2	Defer unused CSS	<div></div>	7,94 s
3	Defer offscreen images	<div></div>	6,9 s
4	Eliminate render-blocking resources	<div></div>	6,76 s
5	Serve images in next-gen formats	<div></div>	2,4 s
6	Use video formats for animated content	<div></div>	1,5 s
7	Minify JavaScript	<div></div>	1,35 s
8	Properly size images	<div></div>	1,05 s
9	Minify CSS	<div></div>	0,9 s
10	Efficiently encode images	<div></div>	0,15 s

Diagnostics

More information about the performance of your application.

1	Text is invisible while webfonts are loading	
2	Uses an excessive DOM size	3.234 nodes
3	Has significant main thread work	10.420 ms
4	Has enormous network payloads	Total size was 5.080 KB
5	JavaScript boot-up time is too high	4.370 ms
6	Uses efficient cache policy on static assets	4 assets found
7	Critical Request Chains	24 chains found

## Progressive Web App

15

These checks validate the aspects of a Progressive Web App, as specified by the baseline [PWA Checklist](#).

- |                                                                                                                                                                      |                                                  |                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|-------------------------------|
| 1                                                                                                                                                                    | Page load is not fast enough on 3G               | Interactive at 25 s ▲ ▼       |
| Your page loads too slowly and is not interactive within 10 seconds. Look at the opportunities and diagnostics in the "Performance" section to learn how to improve. |                                                  |                               |
| 2                                                                                                                                                                    | Does not respond with a 200 when offline         | ▲ ▼                           |
| 3                                                                                                                                                                    | User will not be prompted to Install the Web App | ▲ ▼                           |
| Failures: No manifest was fetched, Site does not register a service worker.                                                                                          |                                                  |                               |
| 4                                                                                                                                                                    | Does not use HTTPS                               | 3 insecure requests found ▲ ▼ |
| 5                                                                                                                                                                    | Does not redirect HTTP traffic to HTTPS          | ▲ ▼                           |
| 6                                                                                                                                                                    | Does not register a service worker               | ▲ ▼                           |
| 7                                                                                                                                                                    | Is not configured for a custom splash screen     | ▲ ▼                           |
| Failures: No manifest was fetched.                                                                                                                                   |                                                  |                               |
| 8                                                                                                                                                                    | Address bar does not match brand colors          | ▲ ▼                           |
| Failures: No manifest was fetched, No ` <meta &gt;`="" found.<="" name="theme-color" tag="" td=""/>                                                                  |                                                  |                               |

## Accessibility

62

These checks highlight opportunities to [improve the accessibility of your web app](#). Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

### Elements Have Discernible Names

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

- |   |                                        |     |
|---|----------------------------------------|-----|
| 1 | Buttons do not have an accessible name | ▲ ▼ |
| 2 | Links do not have a discernible name   | ▲ ▼ |

### Elements Describe Contents Well

These are opportunities to make your content easier to understand for a user of assistive technology, like a screen reader.

- |   |                                             |     |
|---|---------------------------------------------|-----|
| 1 | Form elements do not have associated labels | ▲ ▼ |
|---|---------------------------------------------|-----|

### Elements Are Well Structured

These are opportunities to make sure your HTML is appropriately structured.

- |   |                                            |     |
|---|--------------------------------------------|-----|
| 1 | [id] attributes on the page are not unique | ▲ ▼ |
|---|--------------------------------------------|-----|

⊖ Not applicable 18 audits ▼

## Best Practices

60

1	Does not use HTTPS	3 insecure requests found	▲	▼
2	Does not use HTTP/2 for all of its resources	109 requests not served via HTTP/2	▲	▼
3	Does not use passive listeners to improve scrolling performance		▲	▼
4	Links to cross-origin destinations are unsafe		▲	▼
5	Includes front-end JavaScript libraries with known security vulnerabilities	1 vulnerability detected	▲	▼
6	Displays images with incorrect aspect ratio		▲	▼
✓	<b>Passed audits</b>	9 audits		▼

## SEO

80

These checks ensure that your page is optimized for search engine results ranking. There are additional factors Lighthouse does not check that may affect your search ranking. [Learn more](#).

### Content Best Practices

Format your HTML in a way that enables crawlers to better understand your app's content.

1	Links do not have descriptive text	1 link found	▲	▼
2	Document does not have a valid <code>rel=canonical</code>		▲	▼
	Points to a different domain ( <a href="https://demo.tagdiv.com/newspaper/">https://demo.tagdiv.com/newspaper/</a> )
